USER

Home Page Biotech | Outsourcing Services | ICON plc

Can you scan the above two websites for me.

ASSISTANT

I'll scan both sites across positioning, homepage structure, service architecture, messaging style, trust signals, and how each guides a B2B buyer toward enquiry/contact. I'll also note ideas that could be useful for a healthcare/CDMO website like Zeovus Life.

ASSISTANT

Yes. I've scanned both websites, including their main positioning, navigation, content hierarchy, service/product presentation, credibility sections, and enquiry flow.

The two sites are actually useful references for **very different reasons**:

Area	Onecore Pharma	ICON plc
Business model	Pharmaceutical/product company	CRO / outsourced life-sciences services
Primary website purpose	Present therapeutic portfolio and products	Sell expertise, capabilities and partnerships
Content depth	Relatively simple	Very deep
Navigation	Home ! ' About !' Products by therapeutic area !' Blogs !' Contact	Solutions !' Sectors !' Therapeutics !' Technologies !' Insights !' Case Studies
Main audience	Doctors, healthcare professionals, patients	Biotech/pharma decision-makers
Style of messaging	Product/company focused	Problem/solution and expertise focused
Authority building	WHO-GMP, FSSAI, QA, product portfolio	Expertise, professionals, technologies, case studies, whitepapers, research, regulatory knowledge
Conversion approach	Contact details / enquiry	Multiple contextual CTAs leading toward "Start the conversation"
Best thing to learn from it	Simple product categorisation	B2B healthcare positioning and content architecture

Onecore Pharma

Onecore positions itself around **four therapeutic areas: Orthopaedics, Gynaecology, Paediatrics and General medicine**. Its homepage follows a fairly conventional Indian pharma structure:

Company introduction !' key strengths !' quality assurance !' products !' blogs !' contact.

The strongest part for your purposes is probably its **product-led architecture**. Instead of throwing every product into one catalogue, it groups products around healthcare needs such as Children's Health & Nutrition, Bone & Joint Health,

General & Antibiotics and Maternal & Women's Health.

Its credibility messaging is straightforward: WHO-GMP manufacturing for pharmaceuticals, FSSAI-approved facilities for supplements, stability studies, efficacy evaluations, quality checks and QA batch review.

However, from a sophisticated international B2B perspective, the website is **quite basic**. It talks predominantly about *who Onecore is and what Onecore makes*, rather than deeply addressing what a prospective partner is trying to accomplish.

ICON

ICON is almost the opposite.

Its biotech page immediately addresses the customer's situation:

developing transformative therapies requires a flexible approach.

It then builds the page around **the problems biotech companies face**, rather than starting with a corporate introduction. It discusses limited infrastructure, speed, precision, strategic support, funding, regulatory complexity and development milestones.

The architecture underneath it is much more sophisticated. ICON divides its offering into areas such as:

Clinical solutions !' Clinical & Scientific Operations !' Early Clinical !' Laboratories !' Medical Imaging !' Site & Patient Solutions

Consulting !' Asset Development !' Commercial Positioning !' Regulatory Affairs

Therapeutic expertise !' Cardiovascular !' CNS !' Oncology !' Infectious disease !' Pediatrics !' Women's health !' Rare diseases etc.

More importantly, ICON doesn't merely say "**we provide clinical trials.**" It breaks the service into the actual problems and capabilities a customer might search for: study start-up, biostatistics, clinical supplies, data science, pharmacovigilance, medical writing, logistics, regulatory affairs, project management and so forth.

That is particularly relevant for **SEO/AEO/GEO** because each meaningful capability gets its own semantic territory instead of everything being buried inside one generic "Services" page.

ICON also repeatedly supports commercial claims with:

case studies + whitepapers + surveys + regulatory insights + expert commentary + webinars + technologies + media coverage.

So it doesn't simply say "*we are experts.*" The website is constructed to **demonstrate expertise**.

The most important distinction

For **Zeovus Life**, I would **not copy Onecore's website architecture outright**.

Onecore is useful as a reference for:

Therapeutic categories !' individual products !' product information.

But ICON is much closer to how I would recommend positioning Zeovus Life as an international **innovation + formulation + manufacturing/CDMO partner**.

The ideal Zeovus Life website would effectively combine:

ICON's service architecture and thought-leadership model

Onecore's easy-to-understand therapeutic/product catalogue

Zeovus's formulation, manufacturing, DDS and private-label capabilities.

For example, instead of simply having:

Home | About | Products | Manufacturing | Contact

we could eventually build something closer to:

Solutions | Product Categories | Delivery Systems | Capabilities | Quality | Markets |
Insights | About

and then underneath **Solutions**, talk to the customer's actual need:

Product Development | Formulation & Reformulation | Clinical & Scientific Support
Regulatory Support | Manufacturing | Packaging | Private Label | Market-Ready Products

That is the biggest lesson I take from ICON.

I now have both sites mapped well enough that you can give me the **next instruction—whether you want to redesign Zeovus Life's website architecture, compare specific sections, rewrite pages, or create something inspired by these two—and I can use them as the reference points.**

USER

I want you to redesign the website for onecorepharma. Taking biotech for design language and reference. You can also use other pharma websites as reference, like novartis, novo-nordisk etc. I want you to help me draft content for the onecore pharma website, taking cues from the current the website.

I want a home page, about us, products, news and updates, contact us. We want to show ourself as a trusted pharmaceutical brand, with effective formulations, centered around patients. I am further attaching the products and specializations for your reference. We specialize in these but are not limited to it. Our organization should be reflected as patient and doctor first organization, keeping the below pillars in mind.

Our four-pillar approach, Patients, People, Process, and Partnership, is designed to transform biotech ambition into real-world impact. By combining patient-centric strategies, expert talent, streamlined operations, and collaborative engagement, ICON empowers you to deliver life-changing therapies f a s t e r .

ASSISTANT

Yes. I would reposition Onecore quite substantially.

The current website already has the right raw ingredients — it describes Onecore as founded in 2024, focused on prescription-based healthcare, with an emphasis on innovation, patient safety, quality, and therapeutic specialization. It also states that pharmaceutical products are manufactured in WHO-GMP-certified facilities and supplements in FSSAI-approved facilities. What is missing is the **language, hierarchy and visual confidence of a modern pharmaceutical company.**

The attached portfolio also shows that Onecore is now considerably broader than the four therapeutic categories currently visible online. The portfolio spans oncology, paediatrics, ENT, women's health, general medicine/GI, dermatology, ophthalmology, neurology and orthopaedics, among other areas. For example, the document includes an oncology portfolio on page 1; paediatrics on page 2; ENT on page 3; women's health on page 4; dermatology on page 6; ophthalmology on page 7; neurology on page 8; and orthopaedics on page 9.

I would therefore make the new Onecore feel less like a **product catalogue** and more like a **pharmaceutical organisation built around better care.**

ICON is useful for its large editorial typography, human imagery, short sections, pillar-based storytelling and strong transitions from purpose !' expertise !' proof !' content. Novartis is particularly good at reducing the corporate story to a clear human purpose and then moving naturally into therapeutic areas and science; its current messaging repeatedly connects innovation with outcomes for patients and healthcare professionals. Novo Nordisk takes a similar people-first

approach, pairing scientific ambition with long-term patient needs rather than simply discussing products.

Below is the direction I recommend for the **entire first version of the website copy**.

ONECORE PHARMA

Recommended brand positioning

I would build everything around this central thought:

Science that begins with people.

Supporting positioning:

Onecore Pharma develops trusted pharmaceutical and healthcare formulations shaped around patient needs, clinical practice and the people who deliver care.

And one slightly more corporate version:

Advancing everyday care through science, quality and purposeful formulations.

The language should continually bring together four things:

Patient need !' Physician confidence !' Effective formulation !' Consistent quality

I would avoid describing Onecore as an “innovative pharmaceutical company” in every section. Every pharma company says this. Instead, we need to *show* what Onecore means by innovation.

1. HOME PAGE

HERO

Better healthcare starts with understanding people.

From patient needs to clinical practice, we develop pharmaceutical and healthcare formulations with one purpose — to help make better care possible.

CTA: Explore Onecore **Secondary CTA:** Discover Our Products

Visual direction

This should **not** open with tablets, manufacturing machinery or doctors looking into microscopes.

Use a large ICON/Novartis-style editorial image or short video showing a **real interaction between doctor and patient**.

Possible rotating scenes:

- paediatrician speaking with a parent and child
- doctor speaking to an older patient
- woman consulting her gynaecologist
- ophthalmologist examining a patient

Large type. Lots of whitespace. Minimal animation.

Section 2 — Who we are

Small kicker:

ONECORE PHARMA

Built around better care.

Onecore Pharma is a pharmaceutical company focused on developing reliable, purposeful formulations for evolving healthcare needs.

Founded in 2024, we work across multiple therapeutic areas with particular expertise in paediatrics, women's health, orthopaedics, neurology, ophthalmology, dermatology, ENT, general medicine and oncology. Our growing portfolio brings together prescription medicines, nutritional solutions and specialized healthcare formulations designed around the realities of patients and clinical practice.

CTA: About Onecore

I deliberately would say “**particular expertise in**”, rather than “we specialise only in,” because of your instruction that these are important focus areas but not limitations.

Section 3 — Philosophy

This is where we reinterpret the ICON four-pillar structure for Onecore.

Small kicker:

HOW WE THINK

Four principles. One purpose: better care.

Healthcare works best when every decision starts with the people it is meant to serve. Our approach brings together four principles that guide how we think about products, quality and the relationships we build.

Then four large interactive blocks:

01 — Patients

Start with the person.

Behind every prescription is an individual with a different condition, routine and care journey. Patient needs remain the starting point for how we think about healthcare solutions.

02 — People

Listen to those who deliver care.

Doctors and healthcare professionals understand the realities of treatment better than anyone. Their clinical perspective helps us remain focused on solutions that are meaningful in everyday practice.

03 — Process

Build quality into every step.

From formulation selection and manufacturing to testing and release, disciplined processes help us pursue consistency, safety and reliability across our portfolio.

04 — Partnership

Progress happens together.

Better outcomes require collaboration across healthcare. We believe in building long-term relationships with doctors,

partners and stakeholders based on responsiveness, transparency and trust.

This retains the conceptual strength of ICON's Patients–People–Process–Partnership framework without copying ICON's copy. ICON itself uses its four pillars to connect patient-centric strategy, talent, operations and collaboration.

Section 4 — Therapeutic areas

Small kicker:

OUR FOCUS

Focused expertise. Broader possibilities.

Our portfolio spans established and evolving areas of healthcare, bringing together formulations designed for different stages of life and different clinical needs.

I'd show a large editorial grid, not tiny coloured product cards.

Women's Health

Supporting women's health through different stages of life, with formulations across nutritional support, reproductive health and gynaecological care.

Explore Women's Health !'

Paediatrics

Formulations developed around the distinct nutritional and therapeutic needs of infants, children and adolescents.

Explore Paediatrics !'

Orthopaedics

Solutions spanning bone health, joint health, mobility, pain management and musculoskeletal care.

Explore Orthopaedics !'

Neurology

A growing portfolio supporting neurological and neuro-nutritional care across different patient needs.

Explore Neurology !'

Ophthalmology

Specialized ophthalmic formulations spanning ocular comfort, infection, inflammation and other areas of eye care.

Explore Ophthalmology !'

Dermatology

Prescription and supportive formulations across dermatological and skin-health needs.

Explore Dermatology !'

Then:

ENT · General Medicine · Gastrointestinal Health · Oncology · Nutritional Care · and more

The portfolio file genuinely supports this broader architecture. For example, the ophthalmology section contains a substantial range of eye-drop formulations, while the neurological section includes methylcobalamin-, pregabalin-, citicoline- and other neurological products.

CTA: Explore All Products

Section 5 — Products / formulation philosophy

Instead of the current heading “**Our Most Manufactured Products,**” which sounds like a contract manufacturer rather than a pharmaceutical brand, I would use:

Small kicker:

OUR PORTFOLIO

Formulations with purpose.

Every Onecore product begins with a defined healthcare need.

Our portfolio combines established therapies with differentiated formulations, delivery formats and nutritional solutions across multiple therapeutic areas — giving healthcare professionals options designed around different patient requirements.

Then perhaps feature 4–6 products **only**, each with:

Brand Name Generic/composition Therapeutic category Dosage form

No benefit claims on the homepage.

CTA: View Product Portfolio

Section 6 — Quality

This needs to look extremely clean and credible.

Small kicker:

QUALITY

Trust is built before a product reaches the patient.

Quality is not a final checkpoint. It is part of how every product should be developed, manufactured, evaluated and released.

Onecore's current website states that its pharmaceutical products are manufactured in WHO-GMP-certified facilities, while food supplements are manufactured in FSSAI-approved facilities. It also describes stability studies, quality testing and quality-assurance review before market release. These can become strong trust signals, provided the underlying certification and testing claims are current and documented.

Then use three simple cards:

Quality-led manufacturing Manufacturing through facilities operating under applicable quality and regulatory standards.

Rigorous evaluation Product-specific quality controls and testing designed to support consistency and reliability.

Release with responsibility Quality review before products enter the market.

CTA: Our Approach to Quality

I would **not** use phrases like “highest international standards” unless you have evidence supporting that exact comparative statement.

Section 7 — Doctor-first section

This is important because it differentiates your positioning.

Large photographic section.

Designed for patients. Informed by clinical practice.

Healthcare professionals experience the realities of patient care every day.

We believe pharmaceutical companies should listen to those realities — understanding changing clinical needs, treatment challenges and gaps in care — and use them to guide where better solutions can make a difference.

That perspective helps keep Onecore focused not simply on expanding a portfolio, but on building one that remains relevant to the people prescribing and using it.

CTA: Connect With Onecore

This gives you the **doctor-first** positioning without making an unsubstantiated claim that every Onecore formulation has literally been co-designed with doctors.

Section 8 — News

Small kicker:

NEWS & PERSPECTIVES

What's happening at Onecore

Stories, product developments and perspectives from across our organisation.

Three cards:

Company News Updates and milestones from Onecore.

Healthcare Perspectives Insights into evolving areas of medicine and patient care.

Product Updates New additions and developments across the Onecore portfolio.

CTA: View all news

Very similar conceptually to what ICON, Novartis and Novo Nordisk do: corporate websites are alive because the organisation visibly keeps publishing. ICON, for example, integrates surveys, whitepapers, case studies and expert commentary directly into its sector pages rather than separating thought leadership from the commercial story. Novo Nordisk likewise gives current news a prominent role on its corporate site.

Section 9 — Closing statement

Full-width image.

For every person behind a prescription.

Our work starts with healthcare needs and continues with the people working every day to address them.

Explore Onecore Pharma !'

2. ABOUT US PAGE

This should not be a generic “Company Profile” page.

HERO

****Healthcare is personal.**

Our approach should be too.**

Onecore Pharma was created with a simple belief: pharmaceutical progress should ultimately be measured by what it means for patients and the healthcare professionals caring for them.

Who we are

A growing pharmaceutical company with care at its core.

Founded in 2024, Onecore Pharma Private Limited is an Indian pharmaceutical company developing a growing portfolio of prescription medicines, nutritional products and healthcare formulations.

Our work spans a broad range of therapeutic areas, with established focus across women's health, paediatrics, orthopaedics, neurology, ophthalmology, dermatology, ENT, general medicine and oncology.

As healthcare needs continue to evolve, so will our portfolio. What we intend to keep constant is the thinking behind it: understand the need, respect the science, focus on quality and remember the person at the centre of care.

Purpose

Our purpose

To help make dependable healthcare solutions available to the people who need them.

This is much better than an overblown “transforming global healthcare” statement for a young company.

Vision

Our vision

To become one of the most trusted pharmaceutical brands for patients and healthcare professionals.

This evolves the current website's vision of becoming a trusted partner to healthcare professionals across India.

Mission

Our mission

To develop and deliver purposeful pharmaceutical and healthcare formulations that combine quality, science and an understanding of real patient needs.

Our approach

What keeps us focused

Then the same four pillars, but expanded.

Patients

Care starts with understanding.

Patients are more than conditions or prescriptions. Different ages, lifestyles and treatment journeys create different healthcare needs. We aim to keep those needs visible in the decisions we make about our portfolio.

People

Clinical experience matters.

Doctors, healthcare professionals and our own teams bring the knowledge and perspective that turn scientific possibilities into practical healthcare solutions.

Process

Consistency earns confidence.

Disciplined development, manufacturing, quality control and regulatory processes help provide the reliability that healthcare demands.

Partnership

Healthcare is collaborative.

We want our relationships with healthcare professionals and partners to be built for the long term — grounded in communication, integrity and shared responsibility.

What we work across

Different therapeutic needs. One standard of responsibility.

I would use an animated horizontal category list:

Women's Health Paediatrics Orthopaedics Neurology Ophthalmology Dermatology ENT General Medicine Oncology

And below:

Our areas of focus continue to evolve as we identify opportunities to address unmet and changing healthcare needs.

This is especially important because your attached portfolio is much broader than the current website's four categories.

Quality

Quality patients and doctors can depend on.

Medicines carry responsibility.

That is why quality needs to extend across sourcing, manufacturing, testing, review, storage and delivery — not exist as a single stage at the end of the process.

Onecore works with qualified manufacturing facilities and follows applicable quality and regulatory requirements across its pharmaceutical and nutritional portfolio.

Then certification icons **only where documentary evidence exists.**

Closing About statement

We are still at the beginning.

Onecore was founded in 2024. Our portfolio is growing, our therapeutic reach is expanding and there is much more we intend to build.

But growth itself is not the objective.

Building a pharmaceutical company that patients can depend on and healthcare professionals can trust is.

I particularly like this ending for Onecore because it doesn't pretend that a two-year-old organisation has Novartis's heritage. It converts the company's youth into a strength: **ambitious, focused and still building**.

3. PRODUCTS PAGE

This page needs a major redesign.

The current portfolio uses internal/divisional brands such as **CYTOS, PEDIAPLUS, STIRA, femme, Omnara, Vellis, EYRIX, NEURIX and ortheon**, corresponding to different healthcare areas across the attached portfolio.

I would keep these identities where commercially useful, but **the website should be organised primarily by therapeutic area**, because doctors and search engines think in therapeutic categories, not internal business-unit names.

Hero

Our products

A growing portfolio built around healthcare needs.

Our portfolio spans multiple therapeutic areas and dosage forms, combining established therapies with differentiated pharmaceutical and nutritional formulations.

Category navigation

All Products

Women's Health Paediatrics Orthopaedics Neurology Ophthalmology Dermatology ENT General Medicine & Gastrointestinal Care Oncology

Possibly later:

Nutritional & Supportive Care

Each product card

I recommend:

NERVIA-NX™ Pregabalin 75 mg + Nortriptyline 10 mg + Methylcobalamin 1500 mcg **Neurology** Tablet

View product !'

No enormous descriptions.

When opened, the individual product page could have:

Brand name Generic / composition Dosage form Therapeutic area Product information Prescribing information For healthcare professionals

The attached portfolio, for instance, lists Nervia-NX with pregabalin, nortriptyline and methylcobalamin, while the orthopaedic range includes products such as Curajoy, OneFLEXO, Frecox and Brotop.

Products page closing

Looking for product information?

Healthcare professionals can contact our team for additional information about Onecore products.

Medical/Product Enquiry !'

4. NEWS & UPDATES

I would change the page from a conventional company blog into a lightweight **Newsroom**.

HERO

News & perspectives

Ideas, developments and stories from Onecore.

Explore updates from our organisation, our portfolio and the healthcare areas we work across.

Filters

All Company News Product Updates Healthcare Perspectives Events

Do not call every article a “blog.”

Examples of the *type* of content I would publish

These are proposed editorial topics, **not claims that these events have occurred**:

Healthcare Perspectives

Understanding the changing approach to women's reproductive health

Healthcare Perspectives

Why dosage form matters in paediatric care

Science & Formulation

Liposomal delivery: what it can mean for nutritional formulations

Product Update

Expanding the Onecore ophthalmology portfolio

Company News

Onecore Pharma strengthens its presence across key therapeutic areas

Healthcare Perspectives

Supporting mobility across different stages of life

This page will be important for future **SEO, AEO and brand credibility**.

5. CONTACT US

ICON handles this particularly well by calling the user toward a conversation rather than making contact feel administrative. Its biotech page closes with “**Start the conversation.**”

For Onecore:

HERO

Let's talk healthcare.

Whether you're a healthcare professional seeking product information, a business partner looking to connect, or a patient with a general enquiry, our team is here to help direct your question to the right place.

Contact pathways

Instead of one generic form:

Healthcare Professionals

For product information and professional enquiries.

Contact Medical/Product Information !'

Patients & Caregivers

For general product-related questions and support.

Contact Onecore !'

Business & Partnerships

For distribution, institutional and commercial enquiries.

Discuss a Partnership !'

Media

For company information and media requests.

Media Enquiries !'

Form

I'm contacting Onecore as: Healthcare Professional / Patient or Caregiver / Business Partner / Media / Other

Name Organisation Email Phone Nature of enquiry Message

Then:

Please do not use this form for medical emergencies. Onecore cannot provide individual medical diagnosis or treatment advice. Please consult a qualified healthcare professional regarding personal medical concerns.

Navigation

I would keep your requested navigation extremely simple:

ONECORE logo

Home About Us Products News & Updates Contact Us

And on the right:

Search icon | Contact

The Products menu can expand into therapeutic areas without adding more top-level navigation.

Visual design language

This is where I would borrow **heavily in philosophy** from ICON, Novartis and Novo Nordisk — without visually cloning them.

1. Much larger typography

Think headings like:

Better healthcare starts with understanding people.

not:

Welcome to Onecore Pharma Pvt. Ltd.

2. Real healthcare photography

People should dominate.

Not:

- molecules floating in blue space
- hands holding tablets
- doctors crossing their arms
- generic laboratory stock photographs

Instead:

- authentic consultation
- parent/child
- ageing patient
- female patient
- physician listening
- human details

Novartis's current site heavily uses imagery of patients, families and healthcare interactions alongside scientific imagery, supporting its people-first narrative.

3. Science appears second, not first

The journey should be:

Human need !' science !' formulation !' quality !' product.

Not:

factory !' certificates !' product !' patient.

That distinction is very important.

4. Restrained palette

If Onecore's existing black/grey identity is retained, I would use:

Warm white as primary background **Near-black charcoal** for text **Onecore purple** as the signature accent **Soft lavender / muted grey** for large content fields

Then give individual therapeutic areas very restrained secondary colours.

Not the very colourful product-catalogue aesthetic currently used in the PDF.

5. Editorial layouts

Large image occupying 55–65% of the viewport.

Headline overlapping or sitting beside it.

Sections alternating:

IMAGE | TEXT

then

TEXT | IMAGE

then full-width statement.

Exactly the sort of rhythm that makes ICON's biotech page feel significantly more contemporary than a typical Indian pharmaceutical website.

One thing I would change in the brand language

I would **not make “effective formulations” the headline claim** unless you have appropriate clinical/substantiation documentation for every formulation.

Instead use:

**Purposeful formulations Science-led formulations Formulations designed around healthcare needs
Quality-focused formulations**

And reserve **“efficacy/effective”** for situations where the specific product has appropriate evidence.

Likewise, words such as *innovative, clinically proven, advanced, superior, or better outcomes* should only be attached to products when the evidence supports them.

That will actually make the website feel **more pharmaceutical and credible**, rather than less.

The overall narrative I would build

The whole website should essentially tell one story:

We begin with patients. We listen to healthcare professionals. We apply science thoughtfully. We follow disciplined processes. We build purposeful formulations. And we earn trust one product and one relationship at a time.

That, to me, is the right **Onecore Pharma 2.0** positioning.

If we proceed from here, I would next draft the website at an even more execution-ready level — **every heading, subheading, paragraph, button, navigation label and individual therapeutic-area description exactly in the order the web designer should place them**, rather than the strategic draft above.

USER

Can I get the design layout on how the website would look. Just reading so much content does not give a good idea. Like the how the content would be placed, the font sizes. A structure of the website, I can scroll through to understand.

ASSISTANT

Yes— a visual mockup is the right next step. I've laid out the **Onecore Pharma homepage as a scrollable desktop website concept**, with the actual content hierarchy, image placement, section spacing, typography scale, cards, CTAs, and an optional **"Show design specs"** toggle so you can see font sizes and layout notes as you scroll.

USER

Remove media from the home page. How we think is not clear.

Rest I like the designing and getting an understanding of the content. Similarly design other pages for my review. I want the below pages -

About onecore Patients and caregivers (draft content) Healthcare professionals (draft content) Products (a better name like therapeutics, specialties) News

Lets go page by page and show me the design and content for each page. I am liking the above design language. Minimalist and simple, clean for a pharma company.

ASSISTANT

Agreed. I'll make two changes to the homepage in the next revision: **remove Media completely**, and replace the vague **"How we think"** section with a clearer **"What guides us" / "Our approach to care"** section explaining Patients, Healthcare Professionals, Quality, and Partnership in plain language.

For the page-by-page review, I'll start with **01 — About Onecore**. I've kept the same minimalist visual language, but made this page more corporate and purpose-led. The company's current site says Onecore began in 2024 and positions itself around prescription healthcare, patient safety, quality and specialized therapeutic care, so I've retained that foundation while broadening the story to reflect the larger portfolio you shared.

USER

What guides us is getting repeated. We cannot say we are new, but yes we should show a path forward, looking ahead. Add a section for sustainability. Also these dashes look AI. Remove them. Revise our mission and vision.

Refer the below link.

About | Novartis

ASSISTANT

I've revised the **About Onecore** page around the cleaner Novartis logic of separating purpose, vision, direction and responsibility, while keeping the language distinctly Onecore; I've also removed the repeated "What guides us" section, removed all "new company" framing, added sustainability, and made "Looking ahead" about the path forward rather than age.

USER

OK. Now lets move onto the next section.

ASSISTANT

Next is **Patients & Caregivers**. I've designed it to feel reassuring and useful rather than promotional, with patient education, safe medicine use, caregiver support, product information, safety reporting, and clear routes back to healthcare professionals.

USER

Put patients and healthcare professionals under one heading, give it a name redesign the page. The message that should come out from the page is that, we are here for the patients and doctors. Draft content accordingly. It should be in line with that of global leaders like novartis, novonordisk, lillys etc.

ASSISTANT

I would merge the two into one top level page called **Our Commitment to Care**. That feels more like a global pharmaceutical company than having two separate corporate sections, while the page itself can still give patients and healthcare professionals their own clear pathways.

The direction takes cues from how Novartis connects patient experience with healthcare professional collaboration, Novo Nordisk emphasizes patient and HCP dialogue, and Lilly makes practical product, safety and professional resources easy to reach.

The core Onecore message becomes: **Patients bring lived experience. Doctors bring clinical expertise. Onecore is here to support both.**

USER

Remove our areas of care from here. Under

MEDICAL ENQUIRIES

Ask Onecore

Contact our team with medical or product related questions requiring additional information.

Submit an enquiry !' Remove it, sounds like we are giving medical advice

Also change the name - Our Commitment to Care. Very long.

ASSISTANT

I'd rename the page **Patients & Professionals**. It is much shorter, immediately clear, and still keeps both audiences under one umbrella. I've also removed **Our Areas of Care** and completely removed the **Medical Enquiries / Ask Onecore** block so there is no suggestion that Onecore provides individual medical advice.

USER

Ok! Move to next aspect. Products - I had asked you to change the name. I want the broader to categories to be listed from where we can navigate to individual product page. Design accordingly. **Courses • Institute of Health** Refer the link

ASSISTANT

I would rename **Products** to **Therapeutic Areas**. It feels more pharmaceutical and lets the user browse naturally from **therapeutic area !' portfolio within that area !' individual product page**, rather than landing on a catalogue of medicines.

The Institute of Health reference uses a strong numbered editorial list: each course has a number, title, concise overview, structured supporting information, image and an "Explore More" route. I've adapted that same browsing logic for Onecore, but made it more restrained and pharma-like. The therapeutic groups below follow the portfolio you shared, including oncology, paediatrics and ENT on the opening specialty pages, and women's health, general medicine, dermatology, ophthalmology, neurology and orthopaedics across the later sections.

USER

Remove navigation logic and in the purple section replace with download our catalogue, where the person can fill their details and the catalogue with get downloaded

ASSISTANT

Done. I've removed the **Navigation Logic** section entirely and turned the purple closing section into a proper **Download Our Catalogue** lead-capture block with a short form, privacy note, and automatic-download behaviour concept.

USER

now lets design the individual product page. I want the below details on the product page -

Image Product Name Description Composition Product Benefits Recommended Dosage Mechanism of Working Safety/Caution Information

Let me know if I am missing something. The page should show depth.

ASSISTANT

Yes. For a **deep pharmaceutical product page**, your list is strong, but I would add a few items so it feels closer to the

product pages of global pharma companies rather than a nutraceutical/e-commerce page.

I would add **Therapeutic Area / Indication, Dosage Form, Pack Size, Storage Information, Prescribing / Product Information download**, and a **Safety Reporting link**. For prescription products, I would also be careful with “Product Benefits”: I would call that **Clinical Role / Key Product Information** unless the specific benefits are substantiated in the approved prescribing information.

For the mockup below, I’ve used **OneFLEXO** because the catalogue gives us its actual composition: Aflapin® 100 mg + native undenatured Type II collagen 40 mg + Mobilee® 40 mg. I’ve only treated that composition as source-derived. The dosage, benefits, mechanism and safety text are presented as **layout examples** that should ultimately be aligned to the approved label / prescribing information before publishing.

This is the page structure I would standardize across the whole portfolio. The main addition I would strongly recommend is **Product Resources** at the bottom. That is what gives a pharma product page credibility and depth: the marketing-style explanation stays readable, while the formal prescribing, patient and safety documents remain accessible separately.

USER

Remove Product Details Product Resources

A combination formulation developed for musculoskeletal and joint support within the Onecore orthopaedics portfolio.

CapsuleJoint HealthOrthopaedics

DOSAGE FORM

Capsule

THERAPEUTIC AREA

Orthopaedics

PRODUCT TYPE

Combination formulation

Prescribing informationSafety information

Illustrative page copy. Final claims, dosage and safety information must match approved product documentation.

Also product image can come on the left side and some text on the right side and some below it.

ASSISTANT

Yes. I would simplify the top substantially.

The revised hierarchy should be:

Left: large product image **Right:** Product name, one concise description, composition **Below the fold:** About the product, benefits, recommended dosage, mechanism, safety/caution

No badges, no repeated dosage form/category cards, no prescribing buttons, no “Product Details” or “Product Resources” section.

USER

First description, then composition.

ASSISTANT

Yes. I would change the product page order to:

Product image + Product name !' Description !' Composition !' Product Benefits !' Recommended Dosage !' Mechanism of Working !' Safety / Caution Information

That is a cleaner reading flow because the visitor first understands **what the product is**, then **what it contains**.

For the opening section specifically, I would structure it like this:

Left side: Product image

Right side: OneFLEXO A concise 2–3 line product description explaining what the formulation is and the need it is designed around.

Then immediately below that:

Composition Aflapin® — 100 mg Native Type II Collagen — 40 mg Mobilee® — 40 mg

I would therefore remove the separate “**About the Product**” section lower down, because the description belongs directly beside the product image. The next section after the hero should begin with **Product Benefits**.

That makes the page noticeably tighter and more premium.

USER

Can you redesign the page and show

ASSISTANT

Yes. I've redesigned it so the **opening screen now reads naturally from product !' description !' composition**, with the product image on the left and no duplicate “About the Product” section below. The mockup uses the OneFLEXO composition from your catalogue.

USER

Design the contact page now.

ASSISTANT

For the contact page, I would keep it much more functional than the other pages. The user should immediately know **where to direct an enquiry**, while patient safety remains clearly separated from ordinary contact. I've used the phone number, email and 10 AM to 7 PM hours currently listed on Onecore's live website.
